# Rubber Ducky UI

Rubber Ducky UI Page 1

- The buttons below the Script View will insert the respective commands into the script.
- The delete key, to the right of the number buttons, deletes the currently selected line.

- *The enter key, below the delete key, inserts a new line after the currently selected line.*
- *The save icon saves the currently created script to a text file. The file is stored in the users current home directory.*
- *The pie symbol, below the save icon, mounts the raspberry pi pico and sets the pico up as a rubber ducky.*
- *The ducky icon copies the saved text file and background image to the pico.*

```
STRING  ccopy
%DUCKYdrive%payload-img.png
%userprofile%\Desktop\payload-
img.png
```

MOUNT USB   COPY IMAGE

>_ OPEN CLI   OPEN IMAGE

ALT SPACE   CD %TEMP%

Rubber Ducky UI Page 2

- *The arrows, along the button, switches between button pages.*
- *The macro buttons, on page 2, insert sets of commands that only appear once in the script that the students will be creating.*

Known Bugs

- *Saving the script to a text file is broken on the PenPi*
  - *The home folder is not currently set up correctly on the PenPi.*
  - *The save path is currently handled based on the home directory.*
- *The Raspberry Pi Pico setup button is not currently working.*
- *The Rubber Ducky setup button is not currently working.*
